Carte Figurative des pertes successives en hommes de l'Armée Française dans la campagne de Russie 1812-1813.

Dressée par M. Minard, Inspecteur Général des Ponts et Chaussées en retraite Paris, le 20 Novembre 1869.

Les nombres d'hommes présents sont représentés par les largeurs des zones colorées à raison d'un millimètre pour dix mille hommes; ils sont de plus écrits en travers des zones. Le rouge désigne les hommes qui entrent en Russie, le noir ceux qui en sortent. Les renseignements qui ont servi à dresser la carte ont été puisés dans les ouvrages de M. M. Chiers, de Legur, de Fezensac et le journal inédit de Jacob, pharmacien de l'Armée depuis le 28 Octobre. Pour mieux faire juger à l'œil la diminution de l'armée, j'ai supposé que les corps du Prince Jérôme et du Maréchal Davout qui avaient été détachés sur Minsk et Mohilow et ont rejoint vers Orscha et Witebsk, avaient toujours marché avec l'armée.

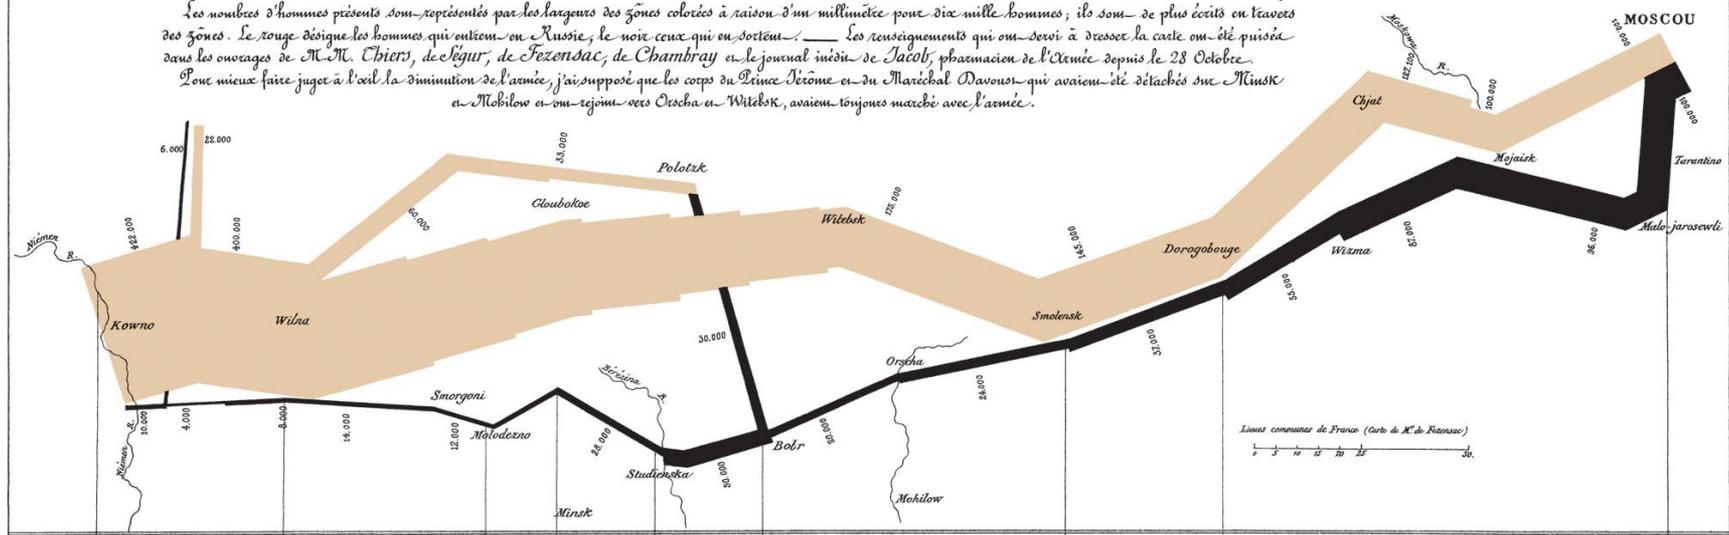

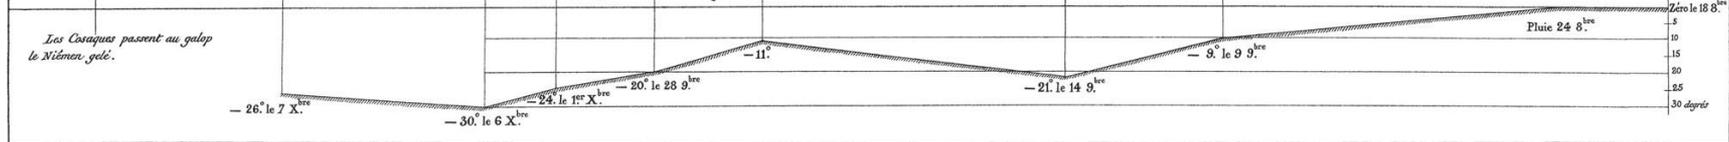

TABLEAU GRAPHIQUE de la température en degrés du thermomètre de Réaumur au dessous de zéro.

Autog. par Regnier, à. Par. 5^{me} Marie 5^{me} G^{de} à Paris.

Imp. Lit. Regnier et Desvres.

Edward Tufte likes it, "probably the best statistical graphic ever drawn", <http://www.edwardtufte.com/tufte/posters>

“ Visualization allows people to offload cognition to the perceptual system, using carefully designed images as a form of external memory. The human visual system is a very high-bandwidth channel to the brain, with a significant amount of processing occurring in parallel and at the pre-conscious level. We can thus use external images as a substitute for keeping track of things inside our own heads. ”

Tamara Munzner, “Visualization,” in *Fundamentals of Computer Graphics* (3rd edition), ed. Peter Shirley, Michael Ashikhmin, and Steve Marschner (Natick, MA: A K Peters, 2009).

“

Visual analytics solutions provide technology that combines the strengths of human and electronic data processing. Visualization becomes the medium of a semi-automated analytical process, where humans and machines cooperate using their respective distinct capabilities for the most effective results.

Visual Information Seeking Mantra:

Overview first, zoom and filter, then details-on-demand.

Type by Task Taxonomy (TTT):

Seven data types

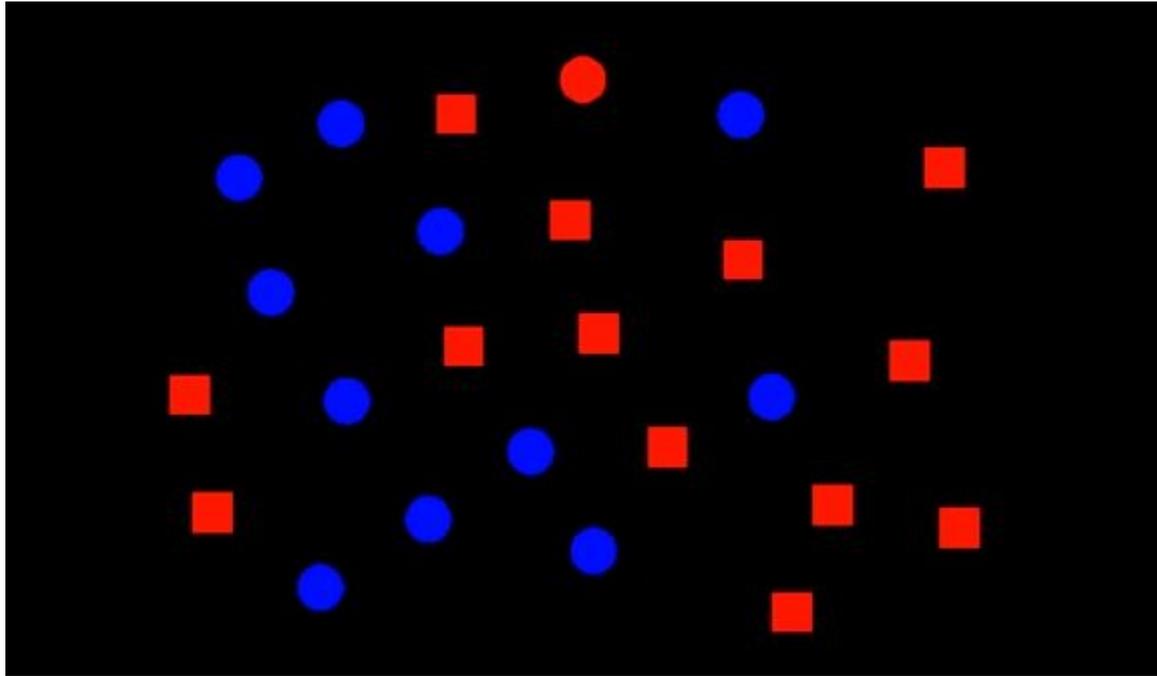

- 1-, 2-, 3-dimensional data, temporal and multi-dimensional data, and tree and network data

Seven tasks

- overview, zoom, filter, details-on-demand, relate, history, extract

Ben Shneiderman, "The Eyes Have It: A Task by Data Type Taxonomy for Information Visualizations", *Proceedings of the 1996 IEEE Symposium on Visual Languages* (1996): 336.
