ESSENTIAL LIBRARY RESOURCES, SERVICES, AND SKILLS FOR GRADUATE STUDENTS

HANWEN DONG

INSTRUCTIONAL TECHNOLOGY LIBRARIAN

HANWENDONG@UIDAHO.EDU

AGENDA

Library Spaces

- I Service Points
- I Study Spaces
- I Research and Experiential Learning

Books and Articles

- I Library Catalog
- I Locating Books, eBooks, and Articles
- I Requesting Materials
- I Databases

Search Strategies

- I Keyword
- I Boolean Operators
- I Truncation
- I Wildcards
- I And more

Library Resources

- I Research Guides
- I Theses & Dissertations
- I Miscellaneous

CIRCULATION DESK

- I Borrow, renew, and return library materials
 - Such as books, course reserve items, board games, CDs/DVDs/LPs, US government documents, and multimedia equipment
- I For grad students:
 - U of I Library books – Loan period is 120 days; two renewals
 - Summit books – Loan period is 12 weeks; one renewal
 - Summit is a resource sharing service for over 30 academic libraries throughout Oregon, Washington and Idaho.
 - Interlibrary Loan (ILL) books – Loan period is four weeks on average; most can be renewed

GROUP STUDY ROOMS

I Reservable Group Study Rooms

- Team 2 (Room 132) (Capacity 8)
- Team 3 (Room 131) (Capacity 8)
- Reserve at <https://libcal.uidaho.edu/reserve/first>

I Open Group Study Rooms

- Room 309, Room 308, Room 322, and Room 321 on the third floor
- Room 414 and Room 415 on the fourth floor

INDIVIDUAL STUDY ROOMS

I Reservable Individual Study Rooms

- Room 318 (Capacity 1)
- Room 319 (Capacity 1)
- Reserve at <https://libcal.uidaho.edu/reserve/third>

FIRST FLOOR INSTRUCTION ROOM

- I Room 120 (Capacity 30)
- I Perfect for evening workshops, co-curricular groups, and large study groups
- I Reserve at <https://libcal.uidaho.edu/reserve/instructionroom>

GRAD STUDENT STUDY CARRELS

Only available to those who:

- I are U of I graduate students
- I have an approved thesis or dissertation topic
- I do not have an assigned office, desk or carrel elsewhere on campus

Carrel applications are [available online](#) and at the Circulation Desk.

COMPUTER LABS

- I Library 1st Floor
 - 56 PCs, four iMacs, three black and white printers, and one color printer
- I Library 2nd Floor
 - 38 dual monitor PCs
- I Library 4th Floor
 - 38 PCs and one black and white printer
- I Software in the computer labs
- I Remote Access Lab Connection Guide

CENTER FOR DIGITAL INQUIRY AND LEARNING (ROOM 211)

I What:

- Digital humanities and digital scholarship center that focuses on web development, oral histories, collaboratory project management
- Advance digital scholarship opportunities at the University of Idaho
- Offers a variety of fellowships

Check out <https://cdil.lib.uidaho.edu/>

DATA HUB (ROOM 107)

I What:

- An educational and collaborative physical and virtual space
- Curricular support to students; consultation and advisory support to other researchers
- Mapping and GIS (geographic information systems), data sciences, quantitative analysis and visualization, and research data management

I When:

- 8:00 AM – 5:00 PM, Monday - Friday
- The desk is staffed from 11:00 AM - 3:00 PM, M-F

Check out <https://www.lib.uidaho.edu/datahub/>

MAKING, INNOVATING, AND LEARNING LABORATORY (ROOM 134)

I What:

- A makerspace to gather, explore, learn, and create new knowledge using state-of-the-art technology and other traditional forms of making
- 3D Printers, Vinyl Cutter, Crafting, Physical Computing, Robotics, Virtual Reality, 3D Modelling
- Walk in or reserve a 3D printer

I When:

- 8:00 AM – 5:00 PM, Monday - Friday

Check out <https://www.lib.uidaho.edu/mill/>

SPECIAL COLLECTIONS READING ROOM (ROOM 121)

I What:

- A designated space to view archival materials
- Find items related to the history and culture of Idaho and the University of Idaho
- Walk in or make an appointment

I When:

- 10:00 AM – 2:00 PM, Monday, Thursday, Friday
- 12:00 PM – 5:00 PM, Tuesday, Wednesday

Check out <https://www.lib.uidaho.edu/special-collections/plan.html>

STUDIO (ROOM 209)

I What:

- A dedicated space to record, edit, or digitize audiovisual content
- Audio and video equipment; eGlass

I When:

- 9:00 AM – 9:00 PM, Monday - Thursday
- 9:00 AM – 7:00 PM, Friday
- 12:00 PM – 5:00 PM, Saturday – Sunday

Check out <https://www.lib.uidaho.edu/studio/>

You must read and acknowledge the following statement before submitting your request.

☐ The University of Idaho is committed to respecting the rights of copyright holders and complying with copyright law. Title 17 of the U.S. code governs the making of reproductions of copyrighted material. Under certain conditions specified in the law, libraries may reproduce copyrighted material. One of these conditions is that the reproduction is not to be "used for any purpose other than private study, scholarship or research." If a patron makes a digitization request or later uses library-digitized material in excess of "fair use", that patron may be liable for copyright infringement. The University of Idaho library reserves the right to refuse a digitization request if, in its judgment, fulfillment of the request would involve violation of the copyright law.

KEYWORD

IDENTIFY THE IMPORTANT WORDS OR PHRASES

- I Exploring the Impact of Artificial Intelligence on Financial Markets: A Comparative Study of Algorithmic Trading Strategies
- I Understanding the Relationship Between Stress and Mental Health: A Longitudinal Study of Work-Related Stressors and Psychological Well-being
- I Investigating the Effects of Climate Change on Biodiversity: A Case Study of Coral Reefs in the Pacific Ocean
- I Examining the Role of Corporate Social Responsibility in Sustainable Business Practices: A Comparative Analysis of Multinational Corporations
- I Investigating the Use of Virtual Reality in Education: A Mixed-Methods Study on Student Engagement and Learning Outcomes

BOOLEAN OPERATORS

TO NARROW OR EXPAND A SEARCH

Use clustering search tools, such as <https://search.carrot2.org/>

Source: <https://learningcommons.lib.uoguelph.ca/item/boolean-operators-cheat-sheet>.

TRUNCATION

TO INCLUDE VARIOUS WORD ENDINGS AND SPELLINGS

I lactat* = lactate, lactation, lactating, etc.

I child* = child, childs, child's, children, children's, childhood, etc.

I genetic* = genetic, genetics, genetically, etc.

Truncation symbols may vary by database; common symbols include: *, !, ?, or #.

Source: <https://libguides.mit.edu/c.php?g=175963&p=1158679>.

WILDCARDS

TO SUBSTITUTE A SYMBOL FOR ONE LETTER OF A WORD

I wom!n = woman, women

I colo?r = color, colour

I pasteuri?ed = pasteurized, pasteurised

Wildcards symbols may vary by database.

Source: <https://libguides.mit.edu/c.php?g=175963&p=1158679>.

PHRASE

TO SEARCH FOR SPECIFIC PHRASES

I "physical therapy"

I "lung cancer"

I "cognitive behavioural therapy"

Most database use double quotation marks "..."

Source: <https://libguides.kcl.ac.uk/systematicreview/advanced>.

COMBINATIONS

TO USE PARENTHESES TO NEST QUERY TERMS WITHIN OTHER QUERY TERMS

- I (Programmed OR Learning Laboratories OR Computer Assisted Instruction) AND Idaho
- I Israel? AND (Arab? OR Palestin?) AND (literature OR fiction) NOT (juvenileOR children's)
- I ((mouse OR rat) AND trap) OR mousetrap

Not all database enable combinations.

PROXIMITY

TO FIND TERMS THAT ARE WITHIN A SET NUMBER OF WORDS OF EACH OTHER

I debt forgiveness~10

- give results that include both the words "debt" and "forgiveness" within 10 words of each other

I diverse NEAR 5 demographic

Not all database enable proximity searching.

Source: <https://support.jstor.org/hc/en-us/articles/115012261448-Searching-Truncation-Wildcards-and-Proximity>.

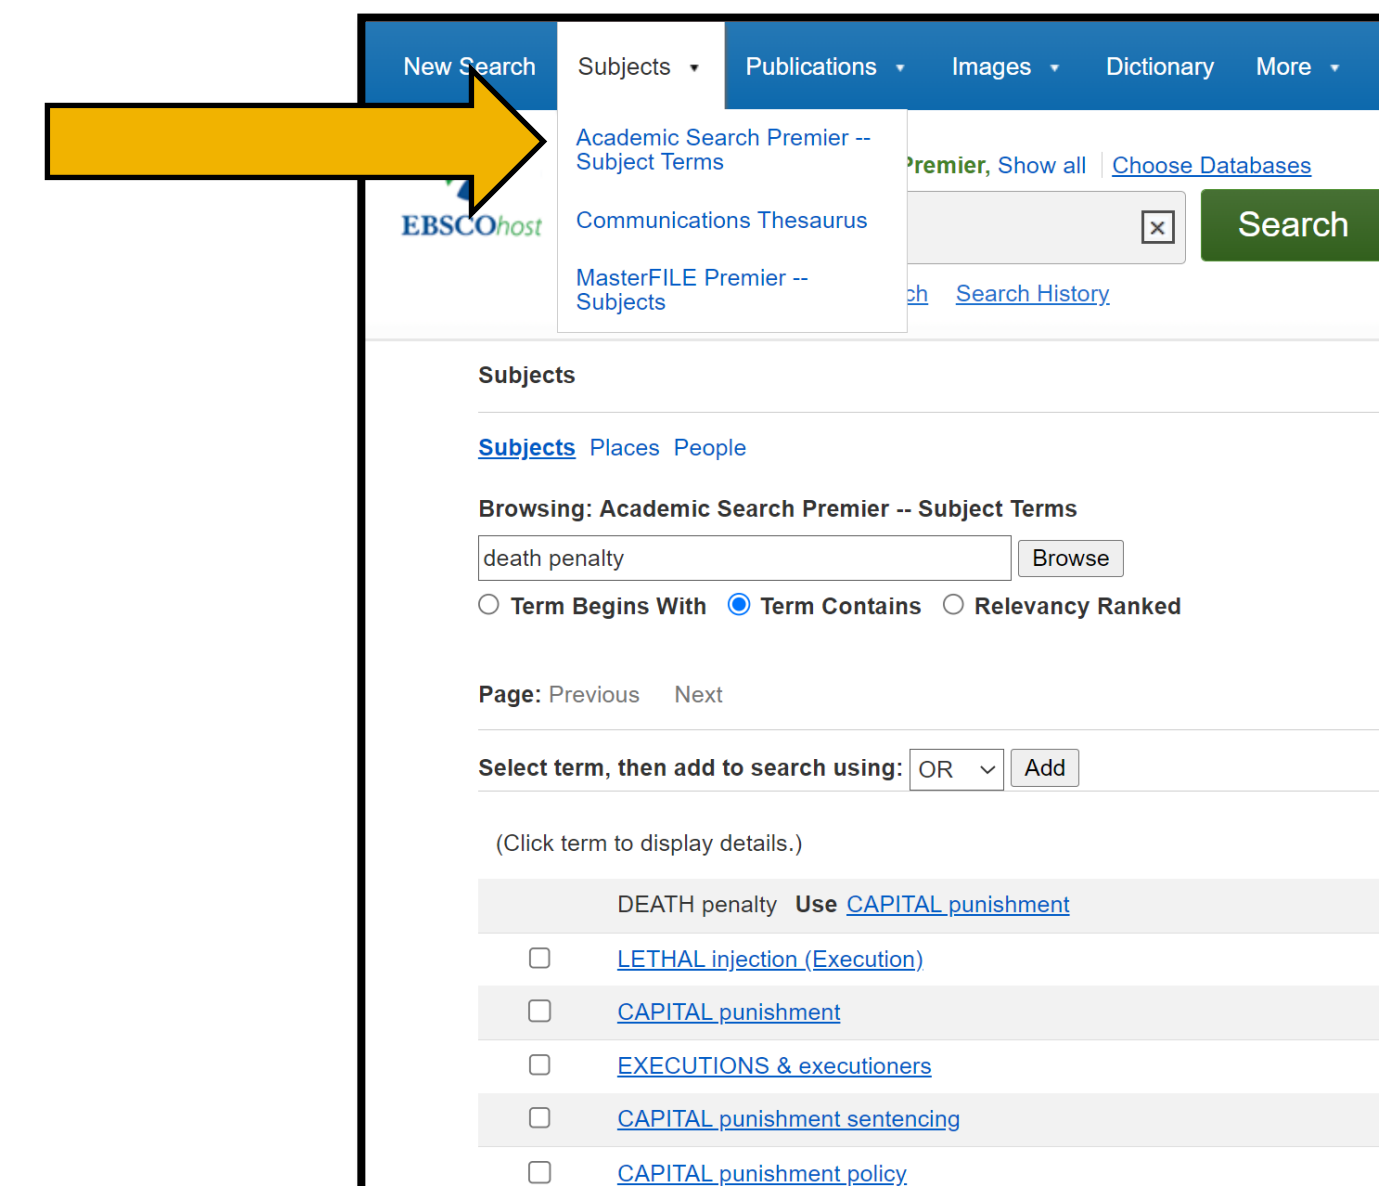

SUBJECT HEADINGS

AN ASSIGNED WORD (OR PHRASE) USED IN A DATABASE TO DESCRIBE A CONCEPT

I Also called controlled vocabulary terms, descriptors, MeSH terms (PubMed), CINAHL Headings, Index Terms, Tags, etc.

I Two ways to locate subject headings

1. Browse the results from keyword search
2. Browse Thesaurus

Most databases have their own unique subject headings, so when you search a different database, you will need to review their own subject headings.

Source: <https://nsufl.libguides.com/c.php?g=112492&p=725946>.

Fatal Attacks by American Black Bear on People: 1900–2009

ABSTRACT At least 63 people were killed in 59 incidents by non-captive black bear (*Ursus americanus*) during 1900–2009. Fatal black bear attacks occurred in Canada and Alaska ($n = 49$) and in the lower 48 states ($n = 14$). There were 3.5 times as many fatal attacks in Canada and Alaska but only 1.75 times as many black bears, and much less human contact for black bears in Canada and Alaska. There was a weak positive correlation ($r_s = 0.56$, $P \leq 0.000$) between the estimated size of a bear population within a given jurisdiction and the number of fatal black bear attacks. Some jurisdictions had no fatal black bear attacks but had large estimated black bear populations. Of fatal attacks, 86% (54 of 63, 1.08/yr) occurred between 1960 and 2009. There was positive linear relationship between the number of fatal black bear attacks per decade and human population size in the United States and Canada per decade ($r^2 = 0.92$, $\beta = 0.000$, $P \leq 0.001$). Of fatal attacks, 91% (49 of 54) occurred on parties of 1 or 2 persons. In 38% (15 of 40) of incidents, peoples' food or garbage probably influenced the bear being in the attack location. We judged that the bear involved acted as a predator in 88% (49 of 56) of fatal incidents. Adult ($n = 23$) or subadult ($n = 10$) male bears were involved in 92% (33 of 36) of fatal predatory incidents, reflecting biological and behavioral differences between male and female bears. That most fatal black bear attacks were predatory and were carried out by 1 bear shows that females with young are not the most dangerous black bears. As a result of our research agencies managing black bear can more accurately understand the risk of being killed by a black bear, and can communicate this to the public. With training, people can learn to recognize the behaviors of a bear considering them as prey and can act to deter predation. © 2011 The Wildlife Society.

KEY WORDS American black bear, fatal bear attacks, *Ursus americanus*, predation on humans, human–black bear conflict.

Although American black bear (*Ursus americanus*) are members of the order Carnivora, they are largely omnivorous (Pelton 2003). Black bear have compact and strong muscles and can run fast for short distances. Their jaws, teeth, forearms, and claws can inflict serious injury to other bears and animals, including people. Aggression and social interaction are components of determining dominance related to occupying space, feeding, and mating. Most individual black bear have the strength to overcome an unarmed person. However, observations of aggressive black bear–black bear and black bear–human interactions have shown that physical contact is a minor component of aggressive interactions (Jordan 1976, Eager and Pelton 1979, Herrero 1985). Black bear are opportunistic predators but in most populations diet is primarily derived from plants and insects (Pelton 2003).

Black bear are a biologically successful, widely distributed species, found from northern Mexico to, and occasionally

beyond, the northern limit of trees in Canada and Alaska. A population estimate for the early 2000s, based on correspondence with most jurisdictions where black bear are found, estimated 750,235–917,650 black bears in North America (Hristienko and McDonald 2007). During the 1980s and 1990s most black bear populations grew numerically and geographically (Williamson 2002). In the United States and Canada, 60% of states and provinces reported increasing populations, and all other populations appeared to be either stable or fluctuating with no clear trend (Garshelis and Hristienko 2006). Between 1988 and 2001 black bear numbers in Canada and the United States were estimated to have increased between 17.6% and 19.8% (Garshelis and Hristienko 2006). Black bear numbers and their wide distribution lead to extensive contact with another widely distributed, numerically successful mammal, human beings. Black bear are often drawn into conflict situations with humans after being attracted by peoples' food or edible garbage (Eager and Pelton 1979, Herrero 1985). Defensive threat behavior is common when a person or other bear comes within the bear's overt reaction distance (Herrero et al. 2005:363). When this occurs black bear behave as

Received: 1 October 2009; Accepted: 8 July 2010

¹E-mail: herrero@ucalgary.ca

that try to prey on people are normal bears responding to opportunity or circumstance and that their genetic makeup is typical of the population they are part of.

Ninth, in about 30% of fatal attacks bear health problems were identified that may have contributed to predatory behavior. A food-stressed bear may be more willing to take risks such as those that occur during attempted predation. Most bears involved in fatal attacks were thought to be healthy.

Finally, we found no instances of a black bear attacking and killing a person near an animal carcass. In this regard, black bear behavior around ungulate carcasses was different than that of brown bear (*U. arctos*). Brown bears occasionally attack or even kill people in defence of an ungulate carcass or to claim a carcass (Herrero and Higgins 1999, 2003), thus supporting the view that black bears are generally less aggressive than brown bears (Herrero 1985).

Reducing Risks From Black Bears

Coupled with human dimensions insight about perceptions of risk associated with human–black bear interactions, our results can contribute to reducing risks from black bear, including fatal black bear attacks and circumstances associated with fatal and potentially fatal attacks. Knowledge of fatal attacks may be used to manage assessed and perceived risk (Knuth et al. 1992; Gore et al. 2005, 2007). Both assessed and perceived risks from black bear are important given the large black bear populations in Canada and the United States. As conflicts between humans and black bear continue to increase (Beckmann et al. 2004, Gore 2004, Beckmann 2009) accurate information becomes fundamental to informed human–bear conflict management. Communicating about black bear-inflicted human fatalities in a statistical manner can contribute to better understanding about black bear attacks, further reduce chances of serious injury or death, and promote public appreciation about black bear. However, we note that an analysis of fatal attacks that occurred over a long time period (110 years) may make black bear seem more dangerous than they are, because some people may focus on the total number and ignore the long time period during which the fatal attacks occurred.

Approaches such as intensive hunting (McDonald 2003, Terment 2008) or supplemental feeding (Ziegeltrum 2004) have been suggested to reduce depredations and serious black bear attacks. Although these approaches may be effective this has not been scientifically demonstrated and they are controversial (The Wildlife Society 2007).

MANAGEMENT IMPLICATIONS

An important management strategy to reduce potentially fatal and other black bear attacks is to inform people how to avoid and manage aggressive encounters with black and other bear species. Strategies such as carrying deterrents like bear spray, traveling in groups >2 people and being alert for bears and bear sign are well known and are supported by our results. It is also important to be able to recognize bear behaviors preceding serious attacks, as we described,

and to know how to deter aggressive bears (Herrero, 1985, Herrero, 2002, Safety in Bear Country Society 2009). A person should try to aggressively deter or fight off a potentially predatory bear using all possible deterrents such as bear spray, loud noises, fists, firearms, rocks, knives, or clubs. If a bear acts stressed and is showing defensive threat behaviors, then a predatory attack is unlikely, which is counterintuitive to many people because the bear is acting aggressively. However, this aggression is defensive, and if the bear is given space it will likely leave. Also, if an aggressive female with young is encountered, a predatory attack is extremely unlikely since most predatory attacks by black bear were by single male bear. While female black bear, even with cubs, seldom attack people they can be provoked into attacking if harassed by people or dogs (Herrero 1985, Herrero 2002; Herrero and Higgins 1999, 2003). The nature of fatal attacks by black bear is somewhat different than fatal attacks by brown bear. For brown bear a substantial proportion of serious and fatal attacks are defensive and are carried out by a female with young (Herrero 1970; Herrero and Higgins 1999, 2003).

ACKNOWLEDGMENTS

We thank the many agencies and individuals who contributed data and insights. Our reviewers' comments significantly improved our paper. Particular thanks, for many thoughtful suggestions, go to H. Hristienko, Wildlife and Ecosystems Protection Branch of Manitoba Conservation, Canada, and to M. Gore, Department of Fisheries and Wildlife, Michigan State University, USA.
